Over 13,000 Repairs Completed & Documented

# “Engineers love data”

When Colt launched its Power Services Division, a transformer engineer at Consolidated Edison of NY advised us to keep track of everything—so we have:

**13,766 jobs completed since 2003**

6,023 Flanges

5,473 Valve packings

983 Custom clamps and enclosures

857 Drain Plugs

277 Cover plates

91 Miscellaneous

38 Tap changer flanges

24 CTs

*(Statistics as of May 2015)*

*93.73% of the leaks were repaired on the first visit, 6.27% (During the 12 Yr period) required re-pumps (under warranty)*

## Oil Leak Repairs for Transformers

- ✓ **No need to drain the oil**
- ✓ **Many repairs can be made in service**
- ✓ **The sealant used is not an epoxy**; it's flexible and easily removed when required. It maintains a “memory” that allows for expansion and contracts as needed due to temperature changes and vibrations. The material has excellent dielectric properties and DGA per test results from an independent laboratory—and has been tested for performance from -40° C/F to 107° C/ 225° F.

***These factors can make leak repair a cost-effective alternative worth considering.***
